Oval Ski Club Website Design & Implementation

By Michael Biggs

Introduction

Oval Ski Club, require a new and updated website as their current website is outdated and not very well implemented.

The idea is to create a new website that consists of seven webpage's, a easy to understand graphical user interface that requires minimal browsing and has design features for the visually impaired.

Specification

I designed I website with important visual layouts but still have the information that was needed to be displayed on screen.

I gave the website a direct flow with each page accessible either way between each page.

there are alt tags on each image as to help with any problems as well as any visually impaired that may be viewing the website.

there are also access keys for a quick guide of the website as well as once being for the visually impaired or blind visiting this website.

i used plenty of aesthetic to please the consumer visually and as well as displaying the right information to compliment this on the given pages
